

What is Squash Merge?

Squash merging is a merge option that allows you to condense the Git history of topic branches when you complete a pull request. Instead of each commit on the topic branch being added to the history of the default branch, a squash merge adds all the file changes to a single new commit on the default branch.

Come to master branch → perform merge of feature branch → use command following:

`git merge --squash`

git log in a master branch → observe commit history of feature branch → it will be squeeze
